

EMMA GARDNER

FRONT-END WEB DEVELOPER

Summary

I'm a builder and a maker, passionate about learning and combining different elements to create a functional unified product. In my work, I've found that JavaScript is the language that I am most passionate about and will continue to explore it as a client and server side tool. Going forward, my goal is to combine my passion for technology and science with my appreciation for aesthetics to create better web experiences.

Employment

Bonobos

Boston, MA

Guide

May 2012 to Jun 2014

- Assisted in opening the first brick and mortar showroom for Bonobos, a men's e-commerce brand focused on supreme customer service and great fitting clothing. Bonobos continues to open new locations due to the proven success of the Boston shop.
- Sold approximately \$500,000 in merchandise over my two year tenure, while providing product guidance and styling assistance to customers.
- Point person for launch dates of new items or re-stocks, managed incoming apparel samples, fit specialist.
- Handled duties including: scheduling, event coordination, and new employee training.

Jun 2007 to May 2011

- Managed projects involving Dansk's commercial real estate portfolio including, reviewing property insurance, title insurance, leases, and the formation of new companies/entities.
- Ensured efficient general office operations for Dansk: booking travel, banking, filing, and phones.
- Worked directly with the President/CEO provided support to three other executive level managers.

Projects

Quadrupeds

Quadrupeds pet services. An informational site for a friend's growing business. I kept it simple using HTML, CSS, JavaScript, and Foundation. It was really exciting to build a website that was going to help a business grow.

Hello, Boston!

For my first project in General Assembly's Web Development Immersive program I created a community website for the city of Boston. Check the weather, Instagram, and read articles with the help of APIs. I used Ruby on Rails to create a posting feature and Ajax to assist in the insertion of the comments. I had Bootstrap's help to stylize this project. Other Technologies used: PostgreSQL.

Weather

An AngularJS app using the Weather Underground API. See the forecast for today, tomorrow, or the next 5 days. This app is still being developed.

Portfolio

My revised portfolio focusing on front-end development skills. I used HTML, CSS, and jQuery to express my personality. Check out some of my technical projects, as well as, other creative projects I have contributed to.
